

PowerView[®] automation now integrates with Matter

*changes
everything*

PowerView[®] Gen 3 Automation is now compatible with Matter, the new universal standard for connected things developed by the Connectivity Standards Alliance (CSA).

Matter is an open smart home protocol designed to connect devices across different brands and platforms, making it easier to install and control your devices. Matter increases compatibility, so that all your devices can seamlessly work together, now and well into the future. Matter integration is built right into the PowerView[®] App for a simple user experience. A PowerView[®] Gateway or Gateway Pro is required for this integration.

Matter is now the primary path to integrate with Apple Home. With Matter-enabled technology, open and close your PowerView[®] shades using the Apple Home app and Siri. The Home app makes it easier to control all your smart home accessories on all your Apple devices. Use your voice to control

PowerView[®] shades and other Apple Home-compatible accessories with Siri. Try saying, *"Hey Siri, open Living Room shades"*, or *"Hey Siri, set Living Room Left shade to 50%"*.

The PowerView[®] App has existing native integrations for Amazon Alexa and Google Home, which are feature rich and well-tested. We recommend that users continue to use these existing integrations.

For more information on all compatible integrations, please view the **Reference guide**.
